DAY-2 ASSIGNMENT

Submit before next class

Best of luck

* Solve all questions * Make a PDF and submit it * Attend all questions mandatory

Q.1 Write a program to print your name with your surname.

Q.2 Create three variables and print about you. (Name, age, and mobile number)

Q.3 Write a python program to add two integers.

Q.4 Write a python program to change the type of data type.

For example, age = 10, which means 10 is an integer, convert it into 10.0 means(float) using type() function

Q.5 Write a python program to create a list data type and store at least 3 values, like name, age and number.

NOTES:

- 1- Take a screenshot of each program you create and make a pdf then upload that link to our excel sheet
- 2- Make sure to keep the share setting of your google drive to "Anyone can view"
- 3- All the best coders!
- 4- For any query, raise your issue at our support number +91 9685832822.
